

# MPU 600 Series B

**Specifications** 

Issue/Rev. 0.5 (10/11) Bulletin SSKS003

The MPU 600 Series B Ultrasonic Gas Flowmeter is a three path ultrasonic meter with non-intrusive and flush mounted transducers providing undisturbed and accurate measurement of gas flow. Compared to traditional gas metering systems, the MPU 600 provides significant cost, space and weight savings for gas system applications.

#### **Features**

- **Digital Ultrasonic Signal Processing** The MPU 600 is able to tolerate substantially higher ultrasonic noise levels than most other ultrasonic meters up to 20 times less sensitive to outside interference.
- In-line Transducer Removal Utilizing a transducer retraction tool with isolation valves, transducers can be easily and safely removed, if required, without the need for process shut down and meter recalibration after transducer reinsertion or replacement.
- AGA Report No. 9 Compliance The MPU 600 has been field tested and verified to AGA 9 performance specifications when accompanied by a well developed flow profile made possible by the installation of long upstream piping or a flow conditioner.
- Advanced Electronics Extensive interface capabilities and high data speed allow for faster diagnostics and the ability to operate and communicate from remote locations or over the Internet.
- Density Calculated from Sound Velocity The sound velocity is measured by the MPU 600 and can be used for the following: comparison to a gas chromatograph for meter health check; density calculations for condition checking; and mass flow rate calculations.
- Pressure and Temperature Compensation Meter volume, signal path length and signal path angle variations due to pressure and temperature changes are compensated to ensure accurate, continuous measurement.
- WinScreen Software Provides real-time logs, trends, signal performance and parameter reports for operational, diagnostics and maintenance purposes. The user-friendly, Windows-based program displays meter information, including visualization of flow regime, on one screen.

# Principle of Operation

The MPU 600 function is based on the well-established acoustic transit time principle. The measurement principle utilizes the fact that the direction and propagation velocity of an ultrasonic pulse will be modified by the flowing medium. An ultrasonic pulse propagating with the flow will experience an increase in velocity while

Transducer and cable protection covers are standard for UL/CUL units but are an option for ATEX units.

an ultrasonic pulse propagating against the flow will experience a decrease in velocity. Turbulence and noise generated frequencies are filtered.

MPU 600 measures the transit time of the ultrasonic signal that is transmitted. The start of the transmission and arrival of the correct signal is detected by the software.

MPU 600 transducers are non-intrusive and flush mounted ensuring minimum risk for clogging up by residues in the flow. The transducer is fully encapsulated, manufactured in titanium and is replaceable during operation and without the need for process shutdown and recalibration after replacement.

# **Applications**

Dry, non-condensing, high pressure gas applications including:

- Custody transfer of gas onshore and offshore
- Pipeline node bi-directional measurements
- Gas terminals
- Gas mixing stations
- Gas power plants
- **■** Pipeline junctions
- Compressor stations

# Operating Specifications

# Flow Range

| Size      | Meter/Second | Feet/Second |  |  |  |
|-----------|--------------|-------------|--|--|--|
| 4-16 in.  | 0.4-30       | 1.3-98      |  |  |  |
| 18-30 in. | 0.3-26       | 1.0-82      |  |  |  |
| 32-56 in. | 0.2-20       | 0.7-65      |  |  |  |

## **Operating Pressure Range**

1-275 bar, / 1 to 3,990 psi,

Higher pressures are available. Please consult factory for pressures above 275 bar.

## Nominal Accuracy 1

With dry calibration:  $\leq \pm 0.7\%$  of measured value With flow calibration:  $\leq \pm 0.3\%$  of measured value Repeatability:  $\leq \pm 0.10\%$  of measured value

Linearity: 0.7% (band)

## Temperature

Operating flow temperature: -20°C to 70°C/-4°F to 158 °F

Operating ambient temperature: -25°C to 60°C/

-13°F to 140°F

Storage temperature: -20°C to 70°C/-4°F to 158°F

# Humidity

Up to 95%, non-condensing

## Standard Flange Connections

Typically ANSI B16.5 RF or RTJ face flanges. Other types of flange connections available on request.

## Spool Piece

Carbon steel or stainless steel according to relevant regulations and customer's process conditions. Other material available on request.

## Transducer

Piezoelectric element, fully encapsulated in titanium housing – special solution for H<sub>2</sub>S and C<sub>6</sub>+ applications

#### Instrument Power

## DC Instrument Input Power to Field Mounted Electronics

24 VDC +15% / -10%, 0.5A

Power inrush: 8 Amps for < 20mS at 24 VDC

The DC power input circuitry is reverse current protected and fused.

Tested to 20 milliseconds power drop without shut down. Meter will always restart orderly after power loss.

## AC Instrument Input Power to Field Mounted Electronics

120/240 VAC continuous, +/- 10%, 12 Watts, 48 to 63 Hz

Power inrush: 6 Amps for <20mS at 120 VAC Power inrush: 3 Amps for <20mS at 240 VAC

The AC circuitry is fuse-protected.

Power Interruption Tolerance: Interruption of power greater than 100 milliseconds (typical) will cause an orderly shutdown. Tested to 20 milliseconds power drop without shut down. Meter will always restart orderly after power loss.

### **Electrical Inputs**

## Digital Inputs

2 digital inputs

Type: High speed, optically isolated digital input. The input pulse must rise above V (high. min) for a period of time and then fall below V (low) to be recognized as a pulse.

V (high): 5 VDC minimum to 28 VDC maximum

V (low): 1 VDC maximum Input impedance: 1.8  $k\Omega$ 

Frequency range: 0 to 10.0 kHz

Mode: Single, dual, dual with power sensing, density

Duty Cycle: 35/65 to 65/35 (on/off)

## Analog Input (4-20mA)

Up to 2 analog inputs (maximum number of analog inputs and outputs are 2)

Type: Two-wire, 4-20mA current loop receiver, isolated

from ground, programmable as to function Span Adjustment: Program adjustable

Input Burden:  $50\Omega$ 

Resolution: One part in 65,536 Voltage Drop: 2 Volts maximum Sampling rate: Software selectable

## Analog Input (1-5 VDC)

Up to 2 analog inputs (maximum number of analog inputs and outputs are 2)

Type: Two-wire, 1-5 VDC voltage loop receiver, isolated

from ground, programmable as to function Span Adjustment: Program adjustable

Input Burden: 1 m $\Omega$ 

Resolution: One part in 65,536

Sampling rate: One sample/ 300 mSec minimum

## **Electrical Outputs**

# Communications

### Ethernet

ANSI/IEEE 802.3 Ethernet channel operating at 10/100 Mbps

Optical fiber (100Base-FL) or

Twisted pair (10Base-T/ 100Base-T)

#### Serial

Configuration: Multi-drop network

Data Rate: Selectable asynchronous data (Baud)

rates of 2400, 4800, 9600 or 19200 bps

Data Format: One start bit, One stop bit, eight data

bits - no parity

Line Protocol: Half duplex, full duplex

Protocol: MODBUS (RTU), DSFG (special option)

Page 2 • SSKS003 Issue/Rev. 0.5 (10/11)

<sup>1</sup> A well developed flow profile made possible by the installation of long upstream piping or a flow conditioner is required to meet the stated accuracy, repeatability and linearity for the MPU 600.

#### **Ports**

Two ports: Selectable from RS-485 and RS-232

### EIA-232 Port

RS-232 data communication

### EIA-485 Port

Operating Half-Duplex (2-wire) or Full Duplex (4-wire) Multi-drop network for RS-485 data communication. Up to 16 Ultrasonic Gas Flowmeters can be connected onto the same Bus/ twisted pair.

### Pulse Output

4 pulse outputs

Type: Open collector type output. User- selectable pulse units, pulse rates and pulse width/duty cycle Volume output selectable for rate and incremental volume

Single or Dual Quadrature (outputs 90 electrical degrees out of phase)

Polarity: Selectable (Normally Open or Normally Closed

Switch Blocking Voltage (Switch Off): 30VDC maximum Load Current (Switch On): 10mA with 0.6 volts drop

Frequency Range: 0 to 5kHz Duty Cycle: 50/50 (on/off)

# **Digital Outputs**

2 digital outputs

Type: Optically-isolated solid state output. User-programmable as to function

Polarity: Programmable (Normally Open or Normally Closed)\*

Switch Blocking Voltage: 30 VDC maximum Load Current: 150mA maximum with 0.6 volt drop *Note: \*Power-down normally open.* 

# Analog Output (4-20mA)

Up to 2 analog outputs (maximum number of analog inputs and outputs are 2)

Type: Two-wire, 4-20mA current loop transmitter, isolated from ground, programmable as to function

Span Adjustment: Program adjustable

Accuracy: +/-0.025% of range Resolution: One part in 65,536 Voltage Burden: 4 volts maximum Maximum Load Resistance: 250Ω

## Analog Output (1-5 VDC)

Up to 2 analog outputs (maximum number of analog inputs and outputs are 2)

Type: Two-wire, 1-5 VDC voltage loop transmitter, isolated from ground, programmable as to function

Span Adjustment: Program adjustable

Accuracy: +/-0.025% of range Resolution: One part in 65,536

# Approvals

## Hazardous Classification

## European type:

Ex Classification: Eex d IIB T5

ATEX Certification: Cert. no. Nemko 05ATEX1244 Cert. no. PTB 07ATEX1018

## North American type:

Ex Classification: Explosion proof, Class 1, Division I,

Group C&D

UL/CUL Certification: E23545

# Type Approvals

Russia: Gosstandart NO.C.29.004.A No. 10209 Indonesia: MIGAS 309738.04-DMT/1999

Malaysia: SIRIM NMC/448/12/4

# **CRN Approved**

Pending

### Installation

With flow conditioner (FC) we recommend 3D then the FC then 7D upstream straight pipe before the meter, 3D downstream straight pipe. For bi-directional measurement, the same 3D+FC+5D on both sides.

# Standard configuration:

Instrument Input Power: 24 VDC or 120/240VAC 2 digital inputs High-speed, optically isolated 2 digital outputs Optically-isolated solid-state output

4 Pulse outputs Optically-isolated solid-state output (0 - 5kHz), user-programmable pulse units,

pulse rates and pulse width/duty cycle, single or dual quadrature.

Ethernet: Twisted pair (10Base-T / 100Base-T)

Serial: Two programmable ports, selected from: RS-485, RS-232

<sup>1</sup> Not available with NMi approval (pending)

Not available with NVIII approval (pending)Not available with PTB approval (pending)Required with PTB and NMI approval

<sup>4</sup> Maximum no. of analog I/O ports: 2 5 Not commercially available yet

<sup>6</sup> Not available in 4"

# Sizing and Minimum/Maximum Flow Rate Chart 7

7 These are typical minimum and maximum flow rates to estimate sizing of the meters for application conditions. For specific applications, data must be submitted to FMC Measurement Solutions for calculations and analysis.

Schedule 40 pipe is used for pressures up to 900 psi; Schedule 80 pipe is used for pressures ranging from 1,000 to 1,900 psi; Schedule 120 pipe is used for pressures of 2,000 psi and above; Temperature used in these calculations is 15°C / 59°F

Revisions included in SSKS003 Issue/Rev. 0.5 (10/11): Page 3: Installation section revised.
